

Kaleeva Alina

QA Manual Engineer

Profile

Detail-oriented QA Engineer with 5+ years of experience in manual functional testing and API testing of client-server web applications, VPN services, and financial blockchain projects. Successfully tested 8 blockchain products — including crypto wallets, blockchain banking, online stores, and blockchain games — built with React.js, React Native, TypeScript, and MongoDB. Proven track record of building testing processes from scratch, significantly improving overall product quality. Currently a key member of the product support team, ensuring seamless releases and consistent quality.

Employment History

BrainQ • QA Engineer
May 2024 – Present

- Conduct comprehensive functional and regression testing of client-server web applications and VPN services, ensuring high system reliability.
- Identify, document, and track defects in Jira; collaborate closely with developers to accelerate bug resolution and prevent regressions.
- Perform API testing with Postman and mobile application testing via Android Studio to guarantee seamless cross-platform functionality.
- Leverage AI-powered tools (ChatGPT, GitHub Copilot) to generate and optimize test cases and checklists, analyze logs, and accelerate test documentation preparation.
- Serve as a key member of the project support team, actively contributing to the establishment and continuous improvement of QA processes from scratch.

Scramp LLC, Minsk • QA Engineer
June 2021 – April 2024

Testing of financial blockchain projects (client and server side). Tested 8 in-house blockchain projects: blockchain banking, a crypto wallet app, an e-commerce store, a blockchain explorer, a blockchain game, and the corporate website. Tech stack: React.js, React Native, TypeScript; MongoDB databases.

- Performed end-to-end functional and non-functional testing for complex client-server web applications.
- Designed, authored, and maintained comprehensive test documentation, including test cases and checklists, to maximize test coverage.
- Utilized Git for version control; cloned, configured, and ran applications locally using VS Code and Yarn to accurately reproduce complex edge-case scenarios.
- Conducted rigorous mobile testing on both real devices and Android Studio emulators to ensure optimal user experience across different platforms.
- Validated backend logic through API testing with Postman and maintained proactive communication with cross-functional development teams to ensure timely, high-quality releases.

Education

Belarus State Economic University | Minsk, Belarus
Specialization: Finance and Credit | Sep 2018 – Jul 2022

Courses & Certifications

- QA Engineering Course — IT Academy (StormNet) | May 2021 – Jun 2021
- Test Automation with Selenium and Python — Stepik.org | Nov 2022 – May 2023
- Corporate English Lessons — ongoing (since 2021 - 2022)
- Web Development (HTML, CSS) — Beonmax | 2020 – 2021
- Web Development (HTML, CSS) — IT Shuttle | 2020 – 2021
